

Optical Illusion Object Lesson

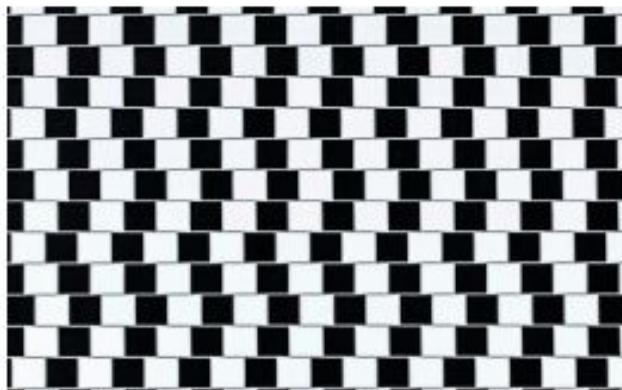

- Print page 2 of this document for your child

Share: We're learning how we fight evil with truth, and one way we can do that is by telling the truth about God when we hear lies about God. Let's practice looking for the truth with some fun, tricky pictures.

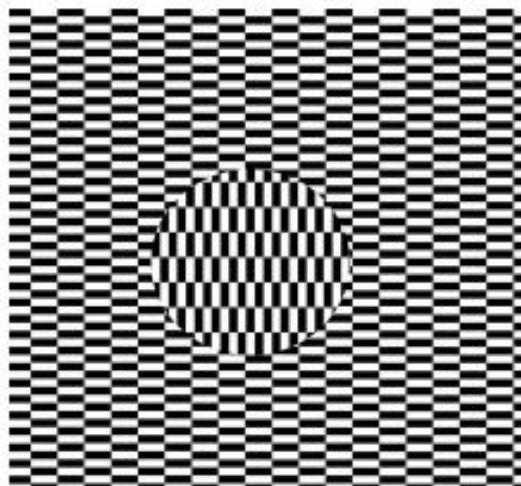

- Let your child study the first picture. Give him/her time to study it and decide if the lines are crooked or straight.
- **Share:** The black and white boxes in the picture don't line up, and that tells our eyes a lie that not all the lines are straight, but they are. The picture sort of lies to our eyes! Sometimes we hear lies with our ears—lies about God that God isn't real. But we can fight those lies with the truth that God is real.
- Give kids time to study the second picture without touching it and decide if there's a ball under the paper.
- **Share:** This picture can confuse our eyes into thinking there's a ball under the paper, but the truth is it's just lines on flat paper. Sometimes we might get confused about God's love, but the truth is that God always loves each of us.
- Give kids time to study the third picture and decide which line is longer.
- **Share:** The first line is exactly the same length as the other, but the circles make our eyes see them differently. Sometimes we might wonder if God is far away from us, but the truth is God's close to us all the time.

Talk about it and share: Lies about God can be tricky, but we won't get tricked when we remember the truth about God. We fight evil with the truth that God is real, God loves us, and God is always with us.
